CONCUSSION RECOGNITION TOOL 5®

To help identify concussion in children, adolescents and adults

RECOGNISE & REMOVE

II Y

Head impacts can be associated with serious and potentially fatal brain injuries. The Concussion Recognition Tool 5 (CRTS) is to be used for the identification of suspected concussion. It is not designed to diagnose concussion.

STEP 1: RED FLAGS — CALL AN AMBULANCE

call an ambulance for urgent medical assessment

Loss of consciousness Seizure or convulsion Severe or increasing headache Neck pain or tenderness • Weakness or tingling/ burning in arms or legs In all cases, the basic principles of first aid (danger, response, airway, breathing, circulation) should be followed. Assessment for a spinal cord injury is critical.

Remember:

Do not attempt to move the player (other than required for airway support) unless trained to so do. Do not remove a helmet or any other equipment unless trained to do so safely. If there are no Red Flags, identification of possible concussion should proceed to the following steps:

STEP 2: OBSERVABLE SIGNS

Visual clues that suggest possible concussion include:

confusion, or an inability to respond appropriately Blank or vacant look Lying motionless on the playing surface Slow to get up after a direct or indirect hit to the head

Balance, gait difficulties, motor incoordination, laboured movements Facial injury after stumbling, slow head trauma

sion in Sport Group 2017

STEP 3: SYMPTOMS

| Difficulty | concentrating | Difficulty remembering | Feeling slowed | down | Feeling like "in a fog" |
|----------------|----------------------|---------------------------|----------------|------------|----------------------------------|
| | ŏ | △ 型 | ŭ. | ō | ŭ (f |
| · | | • | • | | · |
| More emotional | More Irritable | Sadness | Nervous or | anxions | Neck Pain |
| | | | | | |
| Blurred vision | Sensitivity to light | Sensitivity | | Fatigue or | low energy "Don't feel right" |
| | | | | | |
| Headache | "Pressure in head" | Balance problems | Nausea or | vomiting | Drowsiness Dizziness |
| | | | | | |

STEP 4: MEMORY ASSESSMENT

(IN ATHLETES OLDER THAN 12 YEARS)

| Failure to answer any of | • | "What venue are |
|---|---|-----------------------|
| these questions (modified | | we at today?" |
| appropriately for each sport) correctly may | • | "Which half is it now |
| suggest a concussion: | • | "Who scored last |

"What team did you play last week/game?"

"Did your team win the last game?"

Athletes with suspected concussion should:

- Not be left alone initially (at least for the first 1-2 hours).
- Not drink alcohol.
- Not use recreational/ prescription drugs.
- Not be sent home by themselves. They need to be with a responsible adult.
- Not drive a motor vehicle until cleared to do so by a healthcare professional

The CRT5 may be freely copied in its current form for distribution to individuals, iteams, groups and organisations. Any revision and any reproduction in a digital form requires approval by the Concussion in Sport Group. It should not be altered in any way, rebranded or sold for commercial gain.

ANY ATHLETE WITH A SUSPECTED CONCUSSION SHOULD BE IMMEDIATELY REMOVED FROM PRACTICE OR PLAY AND SHOULD NOT RETURN TO ACTIVITY UNTIL ASSESSED MEDICALLY, EVEN IF THE SYMPTOMS RESOLVE
